

Minerva Secure

Cyber Consulting

Understand your security posture, risks and effective steps to improve your data security and cyber security. Protect your customers.

Cyber Consulting

What is your security posture today? What decisions you need to make with the limited resources you have? These are questions that all businesses need to consider, especially when threats are ever changing.

We specialise in providing education and training in information security and cyber security. We offer scoping, consultation and training in different areas. Where you need more help, we can undertake assessments and consultation to help you fast track where you want to be.

Why Minerva Secure?

Business Acumen	Technical aptitude	Experienced Professionals
We first understand about your business, your goals, and your objectives. We also look into your business processes and technical processes, so that we can relay this into something meaningful to the business.	We understand technical concepts and have experience with a variety of different technologies and solutions, including software development, encryption, networks etc.	We have many years of experience across a number of industries and sectors. Whether you are small retailer, or a large financial organisation, we can help.

Education

Data Security Awareness Training

Bespoke Security Training

Services Summary

Assessment

Security Healthcheck

We can undertake assessment and provide you a security benchmark using our base against information security standards to see your 'as is' security posture.

Data Compliance

We can assess your security against industry standards such as PCI DSS, NIST and CIS Top 18 controls.

Testing

We can penetration test your systems, applications and network security to simulate a real-life attack situation, to report to you vulnerabilities to fix.

Consultation

Remediation

Where you have a gap from where your security is, to where you want to be, we can support you through the remediation steps and monitor your progress. We can provide advice and reviews of your plans and strategies to attain compliance.

Strategy

If you are unsure what risks or elements of information and cyber security, we can undertake a benchmark to see where you are, and based on our experience provide a strategic report for you.

vCISO

When a full time Chief Information Security Officer (CISO) and/or Data Protection Officer (DPO) is not cost effective, you can use our part-time virtual vCISO or vDPO service to help you maintain and improve security in your organization.

Education

Education and security awareness is important in any business. Bespoke security training can be delivered. Examples could include data security, pharming/phishing/ransomware, BCP/DR or any other elements of security where your security assessments show needs improvement.
